Completing the Stress ECG Lab:
From Paperless Stress ECG Tracings to Combined Reports

With ProSolv® CardioVascular, creating finalized, signed Stress Electrocardiographic reports is quicker and easier than ever. We have the tools to eliminate your paper trail, to simplify your quantitative measurement process, to create fully customizable reports – everything you need to take your entire Stress ECG reporting process to the next level.

No paper? No sweat.

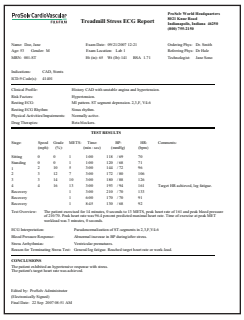
With our Stress ECG Lab Module, all stress test systems, including treadmill systems and pharmacologic stress methods, are directly interfaced to your ProSolv® CardioVascular platform. This eliminates the need for hardcopies of stress ECG tracings, allowing for a faster turnaround time for finalized reports. In fact, this electronic environment will help solve all your workflow issues and cost concerns related to managing a paper trail. It even automates your entire billing process. How does it work? Our Stress ECG Lab interface accepts all ECG data in XML format – the industry standard – allowing all discreet (numeric) data to directly populate your ProSolv® database as well as your clinical reports. This seamless flow of information not only reduces errors, but also eliminates the possibility for redundant data entries. Our software also accepts all tracings in PDF format, which is the recommended method of the Integrated Healthcare Enterprise (IHE) – and compliant with the industry standard.

Only ProSolv® gives you the flexibility to create completely customized reports with ease.

Not only does ProSolv® allow you to customize your reports according to your personal preferences and needs, but we also offer other helpful tools. For instance, you can employ our side-by-side viewing tool to compare a Stress Echocardiogram, Stress Nuclear Cardiology Study and a Stress ECG all at the same time. Or you can easily generate an ICAEL/ICANL compliant, combined Stress Echocardiogram and Stress Nuclear Cardiology report.

Standard ECG Stress report templates include:

- Bicycle Protocol
- Bruce Treadmill Protocol
- Combined Stress ECG/Stress Echocardiogram Summary Report
- Dobutamine Stress Echocardiogram Report
- Combined Stress ECG/Stress Nuclear Cardiology Summary Report
- Adenosine Stress Nuclear Cardiology Report



To discover just how easily ProSolv® CardioVascular can help you complete your ECG labs, contact your ProSolv® CardioVascular Sales Specialist today. Or call 1-800-755-2150 ext. 2.
